

# M I C R O - W H E E L

Designed as ultra-compact (and fun) urban transport,  
principally for short trips between other modes of transport  
(e.g between park & ride & bus stop, or railway station & destination).

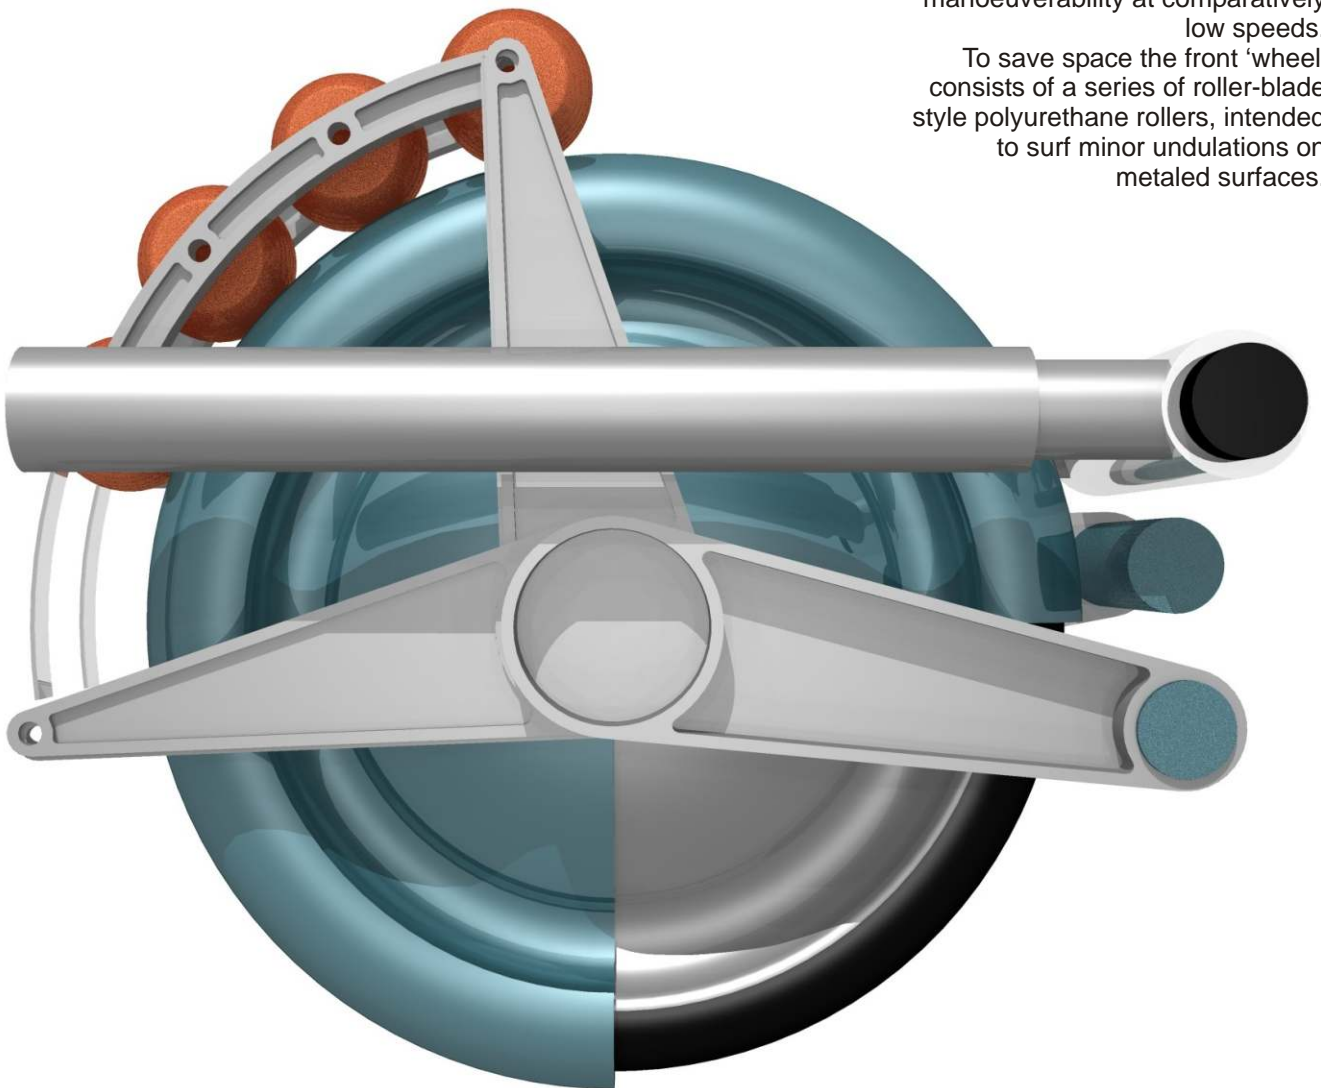

Largely enclosed single wheel driven by concentric cranks, via an internal gear train.

UNIT OPEN

Ultra short wheelbase to give good manoeuvrability at comparatively low speeds.

To save space the front 'wheel' consists of a series of roller-blade style polyurethane rollers, intended to surf minor undulations on metaled surfaces.

UNIT FOLDED
